Matthew Johll's Exploring Chemistry covers the standard topics for the nonmajors course in the typical order, but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real-life situations. For example, students work through the often-difficult topics of molecular structure, gas laws, and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers, and the creation of biodegradable biopolymers. It's the same case-driven approach that Johll uses in his acclaimed Investigating Chemistry (now in its Third Edition) but Exploring Chemistry goes beyond the other book's specific focus on examples from forensic science to use real-life stories from cooking, athletics, genetics, green chemistry, and more.

lots of mistakes in the review questions answers

By MIAOYU ZHAN

well... this is my first time to write the purchases review in my life. I am doing the chemistry homework now and I can not stand any more. I spent 150 dollars on this book but I found more than 3 mistakes in the answers of the review question. for example, in the chapter 2 review question NO.25 d,  $433\text{ cm} = 4.33\text{m}$ , but the answer on the book is  $0.433\text{m}$ . and other mistakes are found in the following chapters, I have to spend more time to check the answers which different with mine, that's really inconvenience.

Excellent book for students in an introductory course

By Mike Goodman

Typical chem texts are so long and so detailed that they confuse and overwhelm students. I am a college professor. This book is written so clearly and so well that students will feel at ease with it. I did find occasional math errors in some of the calculations in problems, but any teacher would clarify these. The little stories that frame each chapter (about crime scenes, pollution, etc) give the student a reason to be curious

about the nitty gritty details of the chemistry.
