The best Guide available

By Harold McFarland

Sponges, jellyfish, flat worms, crustaceans, mollusks, star fish, if it is not a fish then it is in this book. This is the authoritative reference for reef creatures (other than fish) throughout the Florida, Caribbean and Bahamas area. The most complete book on reef creatures that I have seen, it is easy to use and beautifully illustrated. Each creature has it's own full color picture along with a line drawing that points out the defining

characteristics of that particular species. With a plastic cover and the pages treated to resist water it can be taken to the beach or onto the boat without much concern about the water damaging the book.

Each entry has complete information on the creature from size, depth, range and habitat to the level of concern that a diver should have for their safety around the creature. Whether you snorkel, scuba dive or engage in other activities around a reef, this is the best book to have to identify reef creatures. This book can also be purchased as part of a three part set that also includes the Reef Coral Identification and Reef Fish Identification texts, each of which is equally as excellent as the Reef Creature Identification book.

Great book for identifying all types of sea creatures!

By Reviewer Dr. Beth

After we came back from our honeymoon, I wanted to buy my husband a book to help identify the various sea creatures we encountered on our trip, and this book turned out to be perfect. First of all, the animals are broken down into various categories such as "crabs," "squid," etc., and each classification is clearly labelled. There are wonderfully clear, glossy pictures of each individual creature combined with a detailed description which includes information such as size, colors, appearance of immature, habitat, and reaction to divers. An ideal book for serious research or just for fun.

The FINEST identification book out there!

By Wandering Soul

This is a fantastic book, and along with the other two books by this author you should be able to ID any marine creature you encounter!

The book lists virtually all types of creatures including anemones, barnacles, jellyfish, flatworms, crabs, shrimp, octopuses, urchins, and much, much more!

Each entry has an excellent picture, the name, family, size, depth, and other detailed information.

The pictures alone are worth the cost of the book!

This is definitely the book you want to have with you when you dive or snorkel. Buy it today, you won't be disappointed!
